## **Innicor Relocates Calgary Manufacturing Facility & Head Office**

Innicor Subsurface Technologies Inc. is pleased to announce that it has relocated its Calgary manufacturing operations and its corporate head offices to a new facility located at 7071 - 112 Ave SE in the Calgary foothills industrial area. This new 77,000 sq. ft. facility, which was designed and built for Innicor, has allowed the Corporation to combine the four separate Calgary manufacturing facilities owned by Innicor into a single location. This move will allow Innicor to both increase its manufacturing efficiency and manufacturing capacity.

Innicor is a manufacturing centered supplier of products and services used in the completion and production phase of oil and gas wells. The company's products are sold in Canada, U.S. and other international markets. Innicor's management plans to continue to expand through increased market share in both Canadian and international markets and diversification of product lines. As in the past the company will continue to acquire companies, product lines, or other assets that are complementary to its business plan.
